

# DATA BREACH INCIDENT REPORT

Article 33 GDPR — Notification to Supervisory Authority

|                   |                  |
|-------------------|------------------|
| Report Reference  | BR-0001          |
| Date Generated    | 20/08/2026 08:45 |
| Status            | Resolved         |
| Severity          | High             |
| Reportable to ICO | Yes              |

## 1. Nature of the Breach

|                        |                                           |
|------------------------|-------------------------------------------|
| Threat Type            | Sql Injection                             |
| Description            | SQL injection detected. Matched: "select" |
| Date and Time Detected | 19/08/2026 22:53:26 UTC                   |
| Source IP Address      | 127.0.0.1                                 |
| Target URL / System    | /task/breach                              |
| Attack Payload         | select                                    |

## 2. AI Risk Assessment

**Severity:** HIGH

**Reportable to ICO:** No — insufficient evidence of successful data exfiltration to meet the 72-hour reporting threshold at this stage.

**Recommendation:** The DPO should immediately instruct the technical team to confirm whether the injection attempt was successful, preserve logs for evidence, and initiate a full vulnerability assessment of the `/task/breach` endpoint to prevent exploitation of personal data.

## 3. Impact Assessment

|                                |                  |
|--------------------------------|------------------|
| Data Categories Affected       | To be determined |
| Estimated Individuals Affected | To be determined |
| Likely Consequences            | To be determined |

## 4. Remediation Measures

Remediation measures to be documented by the DPO following investigation.
