

DATA BREACH INCIDENT REPORT

Article 33 GDPR — Notification to Supervisory Authority

Report Reference	BR-0001
Date Generated	20/08/2026 10:34
Status	Open
Severity	High
Reportable to ICO	Yes

1. Nature of the Breach

Threat Type	Sql Injection
Description	SQL injection detected. Matched: "select"
Date and Time Detected	20/08/2026 09:34:08 UTC
Source IP Address	127.0.0.1
Target URL / System	/task/breach
Attack Payload	select

2. AI Risk Assessment

Severity: HIGH

Reportable to ICO: Potentially Yes — assess whether personal data was accessed or exfiltrated before making a final determination.

Recommendation: The DPO should immediately isolate the affected endpoint, conduct forensic analysis to determine data exposure scope, and if personal data was compromised, initiate the 72-hour ICO notification process under Article 33 GDPR.

3. Impact Assessment

Data Categories Affected	To be determined
Estimated Individuals Affected	To be determined
Likely Consequences	To be determined

4. Remediation Measures

Remediation measures to be documented by the DPO following investigation.
